# New York State Youth Development Survey

Long Island Regional Youth Development Survey

2010-11 Results Report: SUFFOLK COUNTY 7-12th Grade Students LONG ISLAND REGION

The 2010-2011 Long Island Regional Youth Development Survey effort is supported by the following partners:

New York State Office of Alcoholism and Substance Abuse Services, Long Island Field Office

New York State Office of Alcoholism and Substance Abuse Services, Epidemiology, Survey Management and Ethnography Unit

Eastern Suffolk BOCES Student Assistance Services

Nassau County Department of Mental Health, Chemical Dependency and Developmental Disabilities Services

Suffolk County Department of Health, Division of Community Mental Hygiene Services

The New York State Youth Development Survey was produced by International Survey Associates/Pride Surveys under a contract with the New York State Office of Alcoholism and Substance Abuse Services. For more information, visit www.pridesurveys.com

## 1. INTRODUCTION

This report summarizes findings from the New York State Youth Development Survey conducted during the 2010-11 school year. The survey instrument was designed to assess risk and protective factors that predict substance use and other problem behaviors such as delinquency. The survey also measures substance use, youth gambling and other problem behaviors. In addition, grade groups and gender comparisons often are provided as well.

OASAS uses a number of surveys in assessing the prevalence of substance use, gambling and related problems. The YDS is especially valuable because it provides information on risk and protective factors for school districts and county planning. However, due to differences in survey design, sampling methods, months of administration and estimation methods, the substance use, gambling and other results will differ somewhat across the different surveys, such as, the Youth Development Survey conducted by ISA/PRIDE, the Youth Risk Behavior Survey (YRBS) conducted by the Centers for Disease Control and Prevention, **and** The National Survey on Drug Use and Health (NSDUH) conducted by the Substance Abuse and Mental Health Services Administration (SAMHSA) **as well as other OASAS Surveys.** All these surveys are used by OASAS for policy development and planning at the state and regional levels.

Following receipt of the surveys, all survey forms were checked to determine the validity and reliability of the data. A small percentage of students were judged to have returned invalid survey data. For example, students who claimed to use all drugs at the highest levels of use were eliminated from the final data set. In total, five separate checks of the logical consistency and validity of the students' responses were conducted.

Tables 1 thru 5 contain comparisions of your data to larger aggregates of data, if appropriate. For instance, a school report may also contain comparison data from all the data collected in your district, in your county and if applicabale, your region. Results from county and region data are weighted based on enrollment numbers. Results for school and district are not weighted.

Table 1 contains a count of the students included in this report. Table 2 provides information on the number and percent of students surveyed at each grade level (in order to protect student anonymity, grade levels which recorded fewer than the required minimum number of student responses per grade are reported as 0). Table 3 provides information on the number and percent of students surveyed by sex. Table 4 provides information on the number and percent of students surveyed by Hispanic status. Table 5 provides information on the number and percent of students surveyed of students surveyed by race and ethnicity.

## 2. RISK AND PROTECTIVE FACTORS

Risk and protective factor-focused prevention is based on a simple premise: To prevent a problem from happening, we need to identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. Just as medical researchers have found risk factors for heart attacks such as diets high in fats, lack of exercise, and smoking, a team of researchers, the Social Development Research Group (SDRG), at the University of Washington has defined a set of risk factors for drug abuse. The research team also found that some children exposed to multiple risk factors manage to avoid behavior problems later even though they were exposed to the same risks as children who exhibited behavior problems. Based on research, the team identified protective factors and processes that work together to buffer children from the effects of high risk exposure and lead to the development of healthy behaviors.

Risk factors include characteristics of school, community, and family environments, as well as characteristics of students and their peer groups that are known to predict increased likelihood of drug use, delinquency, and violent behaviors among youth (Hawkins, Catalano & Miller, 1992; Hawkins, Arthur & Catalano, 1995; Brewer, Hawkins, Catalano & Neckerman, 1995).

Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors identified through research reviewed by the Social Development Research Group include: Social bonding to family, school, community and peers; and healthy beliefs and clear standards for behavior.

Research on risk and protective factors has important implications for prevention efforts. The premise of this approach is that in order to promote positive youth development and prevent problem behaviors, it is necessary to address those factors that predict the problem. By measuring risk and protective factors in a population, specific risk factors that are elevated and widespread can be identified and targeted by preventive interventions that also promote related protective factors. For example, if academic failure is identified as an elevated risk factor in a community, then mentoring and tutoring interventions can be provided that will improve academic performance, and also increase opportunities and rewards for classroom participation.

Risk and protective factor-focused drug abuse prevention is based on the work of J. David Hawkins, Ph.D., Richard F. Catalano, Ph.D.; and a team of researchers at the University of Washington in Seattle. Beginning in the early 1980's, the group researched adolescent problem behaviors and identified risk factors for adolescent drug abuse and delinquency. The chart below shows the links between the 16 risk factors and the five problem behaviors. The check marks have been placed in the

chart to indicate where at least two well designed, published research studies have shown a link between the risk factor and the problem behavior.

Table 6: Risk Factors That Inhibit Healthy Youth Development

	PROBLEM BEHAVIORS				
Risk Factors	Substance Abuse	Delinquency	Teen Pregnancy	School Drop-Out	Violence
Community					
Availability of Alcohol and Other Drugs	✓				$\checkmark$
Community Laws and Norms Favorable Toward Substance Use	1	~			~

#### 2.1. HOW TO READ THE CHARTS

- 1. Brief definitions of the risk and protective factors can be found on page 50.
- 2. The factors are grouped into 4 domains: community, family, school, and peerindividual.
- 3. Scanning across these charts, you can easily determine which factors are most (or least) prevalent, thus identifying which are the most important for your community to address.
- 4. Actual percentages are provided in the data tables in Appendix F on page 56. The tables provide percentage figures for county and Long Island level. The headers for each column represent the factors for each domain and the percentage figures represent the percent of students whose factor score exceeds the cutoff point for the particular factor. Suppose, for a specific risk factor, that the percentage figure for the line "Combined" and "County" is 42.3. That would mean that 42.3 percent of all surveyed students in the county were above the cutoff point for that factor.
- 5. The bars represent the percent of students in the grouped grades who reported elevated risk or protection.
- 6. Bars are complemented by a red dash. The red dash shows the comparison from the highest aggregate level (i.e. usually county for a school report) and provides additional information for you in determining the relative importance of each risk or protective factor. If present, a yellow diamond shows the comparison of the aggregate that is the next level down (usually district for a school report).
- 7. A dashed line on each risk and protective factor chart represents the percentage of youth at risk or with protection for the seven state sample upon which the cut-points were developed. The seven states included in the norm group were Colorado, Illinois, Kansas, Maine, Oregon, Utah and Washington. This gives you a comparison to a large multi-state baseline sample.
- 8. The following abbreviations are sometimes used in the tables and charts due to space constraints:

**ATOD** stands for Alcohol, Tobacco and Other Drug Use. **ASB** stands for Antisocial Behaviors. **PSI** stands for Prosocial Involvement.

Risk Factors - Grades 7-8

Protective Factors - Grades 9-10

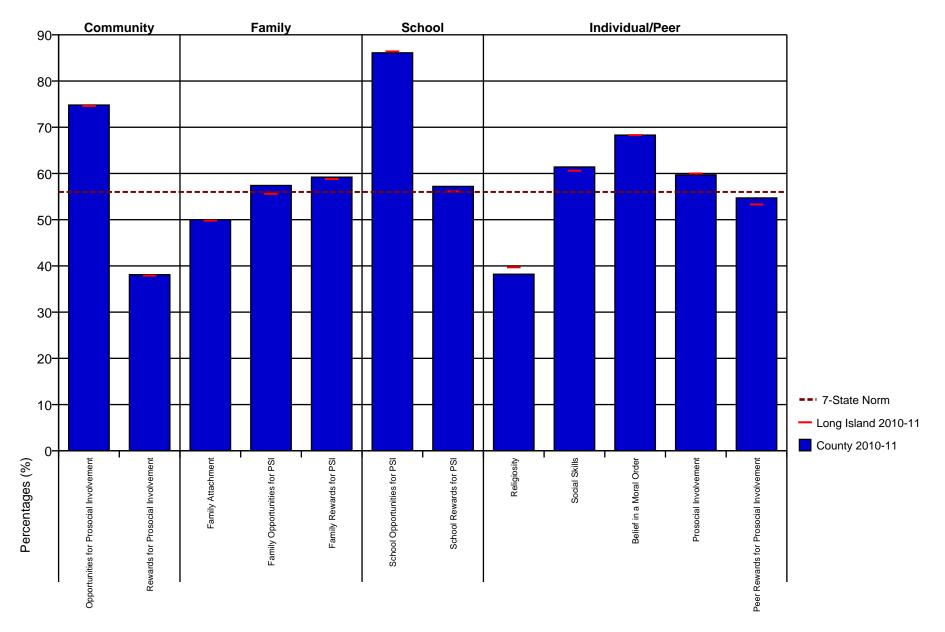

Figure 5: Protective Factors - Grades 9-10

Protective Factors - Grades 11-12

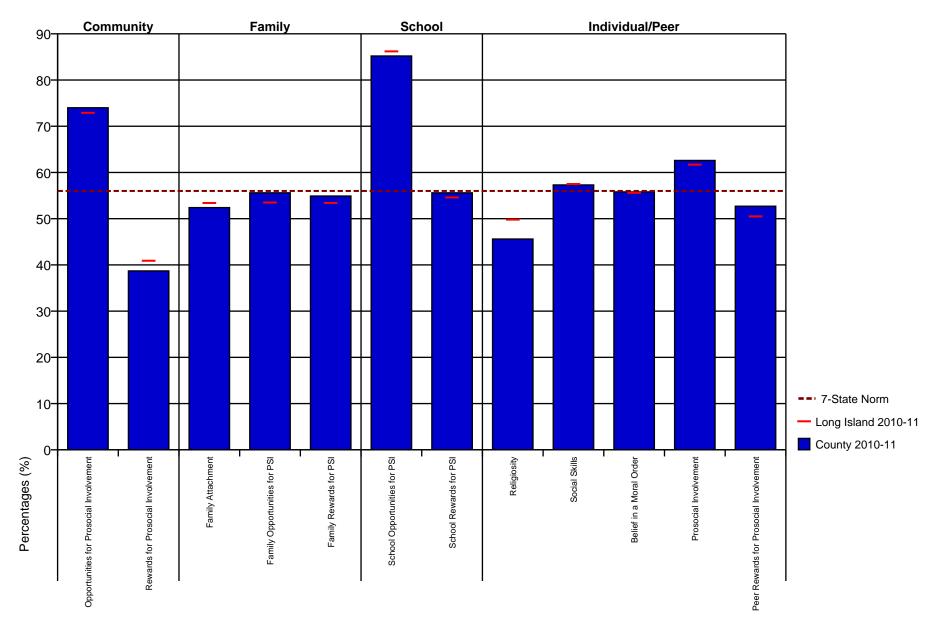

Figure 6: Protective Factors - Grades 11-12

3. ALCOHOL, TOBACCO, AND OTHER DRUG USE

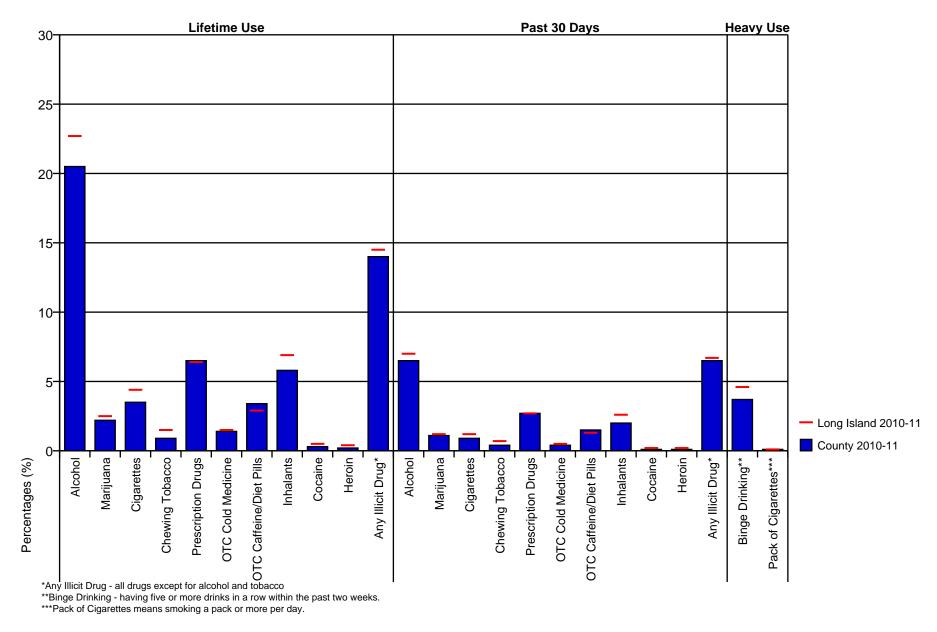

The graphs in this section of the report are six different areas of ATOD use and Antisocial Behavior. These are:

- **Lifetime Use of** ... The questions "On how many occasions have you used ... in your lifetime?" are used to measure this statistic by reporting the percentage of students who reported any use of a particular substance in their lifetime.
- **Past 30 Day Use of** ... The questions "*On how many occasions have you used* ... *during the past 30 days?*" are used to measure this statistic by reporting the percentage of students who reported any use of a particular substance during the past 30 days.
- **Heavy Use of Alcohol and Cigarettes** The questions "*How many times in the past two weeks have you had five or more drinks of alcohol in a row?*" and "*How frequently have you smoked cigarettes during the past 30 days?*" are used to measure this statistic by reporting the percentage of students who report any binge drinking or smoking a pack or more of cigarettes per day during the past 30 days.
- Average Age of First Use of ATOD and Antisocial Behaviors The questions "How old were you when you first ...?" are used to measure this statistic by reporting the average age of first exhibiting the particular behavior whether it be using a particular drug or engaging in a particular behavior. The average is based on only those students who reported the behavior.
- **How Students Get Alcohol and Where They Use It** The questions "*How did you usually get alcohol?*" and "*Where Did You Usually Drink it?*" are used to measure this statistic by reporting the percentage of students for each method of acquiring alcohol and the locations where they used alcohol.

### 3.1. HOW TO READ THE CHARTS

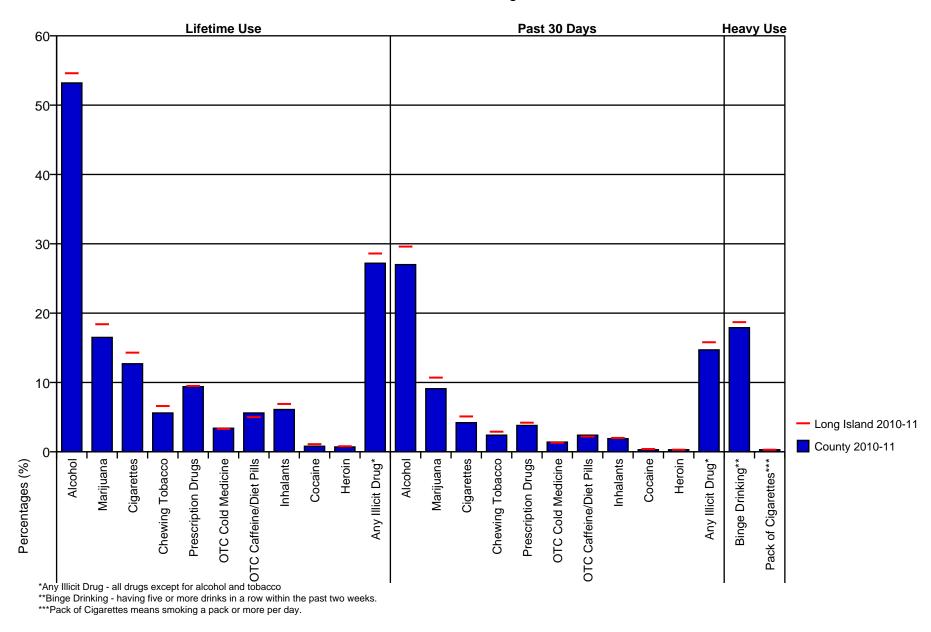

- 1. Student responses for substance use and antisocial behavior questions are displayed by grade groupings on the following pages.
- 2. Actual percentages are provided in the data tables in Appendix F on page 64. The tables provide percentage figures for county and Long Island level and, for students in grades 8, 10 and 12, estimates of lifetime and past 30 days substance use from a national survey (MTF Monitoring the Future). The headers represent the various drugs or activities and the percentage figures represent the percent of students who responded positively to the question. For example, for the table "Lifetime Prevalence of Use", if the "Combined" and "county" percentage figure for a specific drug is 32.3, then 32.3 percent of all surveyed students in the county responded that they had used that drug at least once in their lifetime. In the case of the average age tables, the figures represent the average age of the first use of a particular drug or first incidence of a particular behavior.
- 3. The bars represent the percent of students in the grouped grades who reported substance use.
- 4. Bars are complemented by a red dash. The red dash shows the comparison from the highest aggregate level (i.e. usually county for a school report) and provides additional information for you in determining the relative importance of each risk or protective factor. If present, a yellow diamond shows the comparison of the aggregate that is the next level down (usually district for a school report).
- 5. The following abbreviations are sometimes used in the tables and charts due to space constraints:

**ATOD** stands for Alcohol, Tobacco and Other Drug Use. **ASB** stands for Antisocial Behaviors.

# 4. GAMBLING PREVALENCE INFORMATION

OASAS is the New York State agency principally responsible for the prevention and treatment of substance use and gambling problems. OASAS, New York City and county governments, school districts and prevention service providers, develop and implement policies, plans and services to address substance use and gambling problems. A series of questions were developed for the OASAS 2006 School Survey to address and measure various gambling activities. Students were asked to respond with the number of days, if any, that they had participated in various gambling activities. All the gambling questions, with one exception, refer to activity measured over the past year. The one exception measures activity over the past 30 days. The tables that follow detail the percentage of students who reported engaging in any of the listed activities.

#### 4.1. HOW TO READ THE CHARTS

- 1. Student responses for questions on gambling and gambling behaviors are reported by grade groupings on the following pages.
- 2. Actual percentages are provided in the data tables in Appendix F on page 74. The tables provide percentage figures for county and Long Island level. The headers represent the various gambling activities and the percentage figures represent the percent of students who responded positively to the question. For example, suppose that for a specific gambling behavior, the percentage figure for the line "*Combined*" and "*County*" is 10.5. That means that 10.5 percent of all surveyed students in the county responded that they had engaged in that behavior at least once in the past year.
- 3. The bars represent the percent of students' grade groups levels who reported gambling behaviors.
- 4. Bars are complemented by a red dash. The red dash shows the comparison from the highest aggregate level (i.e. usually county for a school report) and provides additional information for you in determining the relative importance of each risk or protective factor. If present, a yellow diamond shows the comparison of the aggregate that is the next level down (usually district for a school report).

# 5. SCHOOL SAFETY ISSUES

School safety has been an area of growing concern among students, parents and school personnel. This section details how students responded to questions regarding their general feelings of safety and their attitudes and experiences regarding handguns at school.

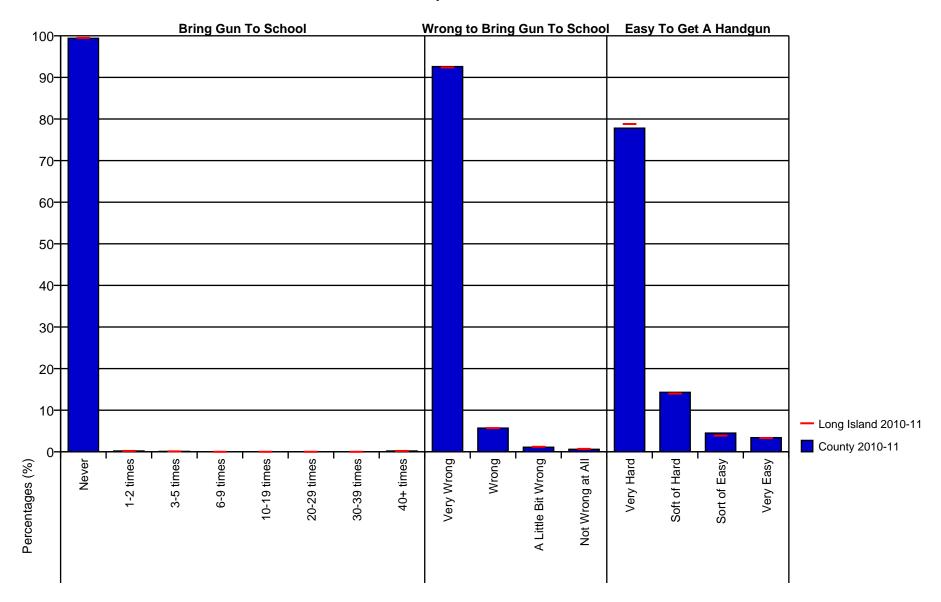

#### 5.1. HOW TO READ THE CHARTS

- 1. Student responses for questions on school safety are reported by grade groupings on the following pages.
- 2. Actual percentages are provided in the data tables in Appendix F on page 77. The tables provide percentage figures for county and Long Island level. The headers represent the responses to questions regarding handguns and the percentage figures represent the percent of students who responded to the question with that response. For example, for a specific antisocial behavior, if under the header "*Never*" the percentage figure for the line "*Combined*" and "*county*" is 98.2, then 98.2 percent of all surveyed students in the county responded that they had never engaged in that antisocial behavior.
- 3. The bars represent the percent of students in the grade groups who reported school safety concerns.
- 4. Bars are complemented by a red dash. The red dash shows the comparison from the highest aggregate level (i.e. usually county for a school report) and provides additional information for you in determining the relative importance of each risk or protective factor. If present, a yellow diamond shows the comparison of the aggregate that is the next level down (usually district for a school report).

Figure 21: School Safety Profile - Grades 11-12

# 6. DRUG-FREE COMMUNITIES SUPPORT PROGRAM CORE MEASURES

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which are typically referred to as the Core Measures. The drug categories measured are tobacco, alcohol and marijuana and the table is broken down by grade level. For each drug, and at each grade level, the percentage of students who responded positively to the question and the number of students who responded to the question are reported. For "*Age of First Use*", the average age of first use for those students who reported use is reported.

- **Past 30-Day Use** The question "On how many occasions have you used ... in the past 30 days?" is used to measure this statistic by reporting the percentage of students who report any use in the past 30 days.
- **Perception of Risk** The question "How much do you think people risk harming themselves if they ...?" is used to measure this statistic by reporting the percentage of students who report that using the drug is a "Moderate Risk" or a "Great Risk" to their health.
- **Perception of Parental Disapproval** The question "*How wrong do your parents feel it would be for you to* ...?" is used to measure this statistic by reporting the percentage of students who report that parents would feel it is "*Wrong*" or "*Very Wrong*" to use tobacco, alcohol and marijuana.
- **Age of Onset** The question "*How old were you when you first...?*" is used to measure this statistic. The possible responses to this question range from *10 or Under* to *17 or Older*. The table shows the average age of onset of use of those students who answered the question with a response other than *Never Used*.

# A. SCHOOL IMPROVEMENT USING SURVEY DATA

Data from the New York State Youth Development Survey can be used to help school and community planners assess current conditions and prioritize areas of greatest need.

Each risk and protective factor can be linked to specific types of interventions that have been shown to be effective in either reducing the risk factor(s) or enhancing the protective factor(s) (see Appendix C). The steps outlined below will help your school and community make key decisions regarding allocation of resources, how and when to address specific needs, and which strategies are most effective and known to produce results.

### A.1. What are the numbers telling you?

Review the charts and data tables presented in this report. Using the table in section A.3, note your findings as you discuss the following questions

- Which 3 to 5 risk factors appear to be higher than you would want?
- Which 3 to 5 protective factors appear to be lower than you would want?
- Which levels of 30 day drug use are unacceptably high?
  - Which substances are your students using the most?
  - At which grades do you see unacceptable usage levels?
- Which levels of antisocial behaviors are unacceptably high?
  - Which behaviors are your students exhibiting the most?
  - At which grades do you see unacceptable behavior levels?

### A.2. How to decide if a rate is "unacceptable."

- Look across the charts to determine which items stand out as either much higher or much lower than the others.
- Compare your data to statewide data and national data. Differences of 5% or more between the local and other data should be carefully reviewed.
- Determine the standards and values held in your area. For example: Is it acceptable in your community for 75% of high school students to drink alcohol regularly even when the statewide percentage is 90%?

### A.3. Use these data for planning:

- Substance use and antisocial behavior data raise awareness about the problems and promote dialogue.
- Risk and protective factor data identify exactly where the community needs to take action.
- Evidence-based Programs and Practices use the resources in Appendix B and identify EBP programs in the chart provided in Appendix C.

	Unacceptable	Unacceptable	Unacceptable	Unacceptable
Measure	Rate $\#1$	Rate #2	Rate #3	Rate #4
30 Day				
Drug Use				
Antisocial				
Behavior				
Risk				
Factors				
Protective				
Factors				

#### How do I decide which intervention(s) to employ?

- Strategies should be selected based on the risk factors that are high in your community and the protective factors that are low.
- Strategies should be age appropriate and employed prior to the onset of the problem behavior.
- Strategies chosen should address more than a single risk and protective factor.
- No single strategy offers the solution.

#### How do I know whether or not the intervention was effective?

• Participation in the administration of the YDS survey every two years will provide trend data necessary for determining the effectiveness of the implemented intervention(s) and also provides data for determining any new efforts that are needed.

# D. RISK AND PROTECTIVE FACTORS DEFINITIONS

The following table provides a definition for each of the risk and protective factors in this report. Each definition consists of the name of the factor, a short definition of the factor and the survey questions used to calculate the factor. Table 16: Risk and Protective Factor Scale Definition

	Community Domain Risk Factors						
Low Neighborhood	A low level of bonding to the neighborhood is related to higher						
Attachment	levels of juvenile crime and drug selling.						
114. I'd like to get out o 113. I like my neighborh 111. If I had to move, I							
Community Disorganization	Research has shown that neighborhoods with high population density, lack of natural surveillance of public places, physical deterioration, and high rates of adult crime also have higher rates of juvenile crime and drug selling.						
<ul> <li>110a. How much do each of the following statements describe your neighborhood? crime and/or drug selling</li> <li>110b. How much do each of the following statements describe your neighborhood? fights</li> <li>110c. How much do each of the following statements describe your neighborhood? lots of empty or abandoned buildings</li> <li>110d. How much do each of the following statements describe your neighborhood? lots of graffiti</li> </ul>							
Laws and Norms       Research has shown that legal restrictions on alcohol and to- bacco use, such as raising the legal drinking age, restricting smoking in public places, and increased taxation have been fol- lowed by decreases in consumption. Moreover, national surveys of high school seniors have shown that shifts in normative atti- tudes toward drug use have preceded changes in prevalence of use.							
<ul> <li>109a. How wrong would most adults (over 21) in your neighborhood think it is for kids your age: to use marijuana?</li> <li>109b. How wrong would most adults (over 21) in your neighborhood think it is for kids your age: to drink alcohol?</li> <li>109c. How wrong would most adults (over 21) in your neighborhood think it is for kids your age: to smoke cigarettes?</li> <li>119. If a kid drank some beer, wine or hard liquor (for example, vodka, whiskey, or gin) in your neighborhood would he or she be caught by the police?</li> <li>118. If a kid samked marijuana in your neighborhood would he or she be caught by the police?</li> <li>120. If a kid carried a handgun in your neighborhood would he or she be caught by the police?</li> </ul>

Prosocial Involvement       participation, children are less likely to engage in substance use and other problem behaviors.         117a. Which of the following activities for people your age are available in your com- munity? sports teams         117b. Which of the following activities for people your age are available in your com- munity? scouting         117c. Which of the following activities for people your age are available in your com- munity? scouting         117d. Which of the following activities for people your age are available in your com- munity? boys and girls clubs         117d. Which of the following activities for people your age are available in your com- munity? 4-H clubs         117e. Which of the following activities for people your age are available in your com- munity? service clubs         Rewards for Prosocial Involvement       Rewards for positive participation in activities help children bond to the community, thus lowering their risk for substance use.         Involvement       Iam doing a good job and let me know about it.			
116. There are people in my neighborhood who encourage me to do my best. 115. There are people in my neighborhood who are proud of me when I do something well.			
Family Domain Risk Factors Parents' use of inconsistent and/or unusually harsh or severe			
Poor Family       Parents' use of inconsistent and/or unusually harsh or severed punishment with their children places them at higher risk for substance use and other problem behaviors. Also, parents' failure to provide clear expectations and to monitor their children's behavior makes it more likely that they will engage in drug abuse whether or not there are family drug problems.			
t m r I I I			

### Risk and Protective Factor Scale Definition (continued)

<ul> <li>101. My parents ask if I've gotten my homework done.</li> <li>103. Would your parents know if you did not come home on time?</li> <li>87. When I am not at home, one of my parents knows where I am and who I am with.</li> <li>85. The rules in my family are clear.</li> <li>90. My family has clear rules about alcohol and drug use.</li> <li>89. If you drank some beer or wine or liquor (for example, vodka, whiskey, or gin) without your parents' permission, would you be caught by your parents?</li> <li>91. If you skipped school would you be caught by your parents?</li> </ul>				
Family Conflict	Children raised in families high in conflict, whether or not the child is directly involved in the conflict, appear at risk for both delinquency and drug use.			
102. People in my famil	often insult or yell at each other. y have serious arguments. same things in my family over and over.			
Family History of Antisocial Behavior	When children are raised in a family with a history of problem behaviors (e.g., violence or ATOD use), the children are more likely to engage in these behaviors.			
<ul> <li>107. Has anyone in your family ever had severe alcohol or drug problems?</li> <li>83a. Have any of your brothers or sisters ever: drunk beer, wine or hard liquor (for example, vodka, whiskey or gin)?</li> <li>83b. Have any of your brothers or sisters ever: smoked marijuana?</li> <li>83c. Have any of your brothers or sisters ever: smoked cigarettes?</li> <li>108a. About how many adults (over 21) have you known personally who in the past year have: used marijuana, crack, cocaine, or other drugs?</li> <li>108b. About how many adults (over 21) have you known personally who in the past year have: sold or dealt drugs?</li> <li>108c. About how many adults (over 21) have you known personally who in the past year have: done other things that could get them in trouble with the police, like stealing, selling stolen goods, mugging or assaulting others, etc.?</li> <li>108d. About how many adults (over 21) have you known personally who in the past year have: gotten drunk or high?</li> </ul>				
Parental Attitudes       In families where parents use illegal drugs, are heavy users of alcohol, or are tolerant of children's use, children are more likely to become drug abusers during adolescence. The risk is further increased if parents involve children in their own drug (or alcohol) using behavior, for example, asking the child to light the parent's cigarette or get the parent a beer from the refrigerator         82a. How wrong do your parents feel it would be for YOU to: drink beer, wine or hard liquor (for example, vodka, whiskey or gin) regularly?         82b. How wrong do your parents feel it would be for YOU to: smoke cigarettes?         82c. How wrong do your parents feel it would be for YOU to: smoke cigarettes?				
Parental Attitudes Favorable Toward Antisocial Behavior	<b>avorable Toward</b> behavior (i.e. fighting, stealing, defacing property, etc.), chil-			

continued on the next column

82d. How wrong do your parents feel it would be for YOU to: steal something worth more than \$5?

82e. How wrong do your parents feel it would be for YOU to: draw graffiti, write things, or draw pictures on buildings or other property (without the owner's permission)? 82f. How wrong do your parents feel it would be for YOU to: pick a fight with someone?

Family Attachment	Young people who feel that they are a valued part of their family are less likely to engage in substance use and other problem				
	Young people who feel that they are a valued part of their family are less likely to engage in substance use and other problem behaviors.				
<ul><li>92. Do you feel very close to your mother?</li><li>93. Do you share your thoughts and feelings with your mother?</li><li>99. Do you feel very close to your father?</li><li>95. Do you share your thoughts and feelings with your father?</li></ul>					
Opportunities for Prosocial Involvement	Young people who are exposed to more opportunities to par- ticipate meaningfully in the responsibilities and activities of the family are less likely to engage in drug use and other problem behaviors.				
<ul><li>100. My parents give me lots of chances to do fun things with them.</li><li>94. My parents ask me what I think before most family decisions affecting me are made.</li><li>98. If I had a personal problem, I could ask my mom or dad for help.</li></ul>					
Rewards for Prosocial Involvement	When parents, siblings, and other family members praise, en- courage, and attend to things done well by their child, children are less likely to engage in substance use and problem behaviors.				
<ul><li>105. My parents notice when I am doing a good job and let me know about it.</li><li>106. How often do your parents tell you they're proud of you for something you've done?</li><li>96. Do you enjoy spending time with your mother?</li><li>97. Do you enjoy spending time with your father?</li></ul>					
	School Domain Risk Factors				
Academic Failure	Beginning in the late elementary grades (grades 4-6) academic failure increases the risk of both drug abuse and delinquency. It appears that the experience of failure itself, for whatever reasons, increases the risk of problem behaviors.				
	<ul><li>16. Putting them all together, what were your grades like last year?</li><li>12. Are your school grades better than the grades of most students in your class?</li></ul>				
Low Commitment to School	Surveys of high school seniors have shown that the use of hal- lucinogens, cocaine, heroin, stimulants, and sedatives or non- medically prescribed tranquilizers is significantly lower among students who expect to attend college than among those who do not. Factors such as liking school, spending time on homework, and perceiving the coursework as relevant are also negatively related to drug use.				

#### Risk and Protective Factor Scale Definition (continued)

15. How often do you feel that the school work you are assigned is meaningful and important?

18. How interesting are most of your courses to you?

17. How important do you think the things you are learning in school are going to be for your later life?

14a. Now thinking back over the past year in school, how often did you: enjoy being in school?

14b. Now thinking back over the past year in school, how often did you: hate being in school?

14c. Now thinking back over the past year in school, how often did you: try to do your best work in school?

19. During the LAST FOUR WEEKS how many whole days of school have you missed because you skipped or 'cut'?

School Domain Protective Factors					
Opportunities for Prosocial Involvement	When young people are given more opportunities to participate meaningfully in important activities at school, they are less likely to engage in drug use and other problem behaviors.				
<ul> <li>6. In my school, students have lots of chances to help decide things like class activities and rules.</li> <li>9. There are lots of chances for students in my school to talk with a teacher one-on-one.</li> <li>8. There are lots of chances for students in my school to get involved in sports, clubs, and other school activities outside of class.</li> <li>13. I have lots of chances to be part of class discussions or activities.</li> </ul>					
Rewards for Prosocial Involvement	butions at school, they are less likely to be involved in substance				
10. The school lets my	<ol> <li>My teacher(s) notices when I am doing a good job and lets me know about it.</li> <li>The school lets my parents know when I have done something well.</li> <li>My teachers praise me when I work hard in school.</li> </ol>				
Individual/Peer Risk Factors					
Rebelliousness	Young people who do not feel part of society, are not bound by rules, don't believe in trying to be successful or responsible, or who take an active rebellious stance toward society, are at higher risk of abusing drugs. In addition, high tolerance for deviance, a strong need for independence and normlessness have all been linked with drug use.				
<ul><li>32. I do the opposite of what people tell me, just to get them mad.</li><li>34. I ignore rules that get in my way.</li><li>33. I like to see how much I can get away with.</li></ul>					
Early Initiation of Drug Use					

continued on the next column

### Risk and Protective Factor Scale Definition (continued)

<ul><li>22a. How old were you when you first: smoked marijuana?</li><li>22b. How old were you when you first: smoked a cigarette, even just a puff?</li><li>22c. How old were you when you first: had more than a sip or two of beer, wine or hard liquor (for example, vodka, whiskey, or gin)?</li><li>22d. How old were you when you first: began drinking alcoholic beverages regularly, that is, at least once or twice a month?</li></ul>						
Early InitiationEarly onset of antisocial behaviors such as being suspended fromof Antisocial Behaviorschool, arrests, carrying handguns, fighting, etc. makes youngpeople more likely to be involved in substance abuse.						
<ul><li>22g. How old were you when you first: got suspended from school?</li><li>22h. How old were you when you first: got arrested?</li><li>22i. How old were you when you first: carried a handgun?</li><li>22j. How old were you when you first: attacked someone with the idea of seriously hurting them?</li></ul>						
Attitudes Favorable	Attitudes Favorable During the elementary school years, most children express anti-					
Toward Drug Use and	drug, anti-crime, and pro-social attitudes and have difficulty					
Antisocial Behavior	imagining why people use drugs. However, in middle school,					
	as more youth are exposed to others who use drugs, their atti- tudes often shift toward greater acceptance of these behaviors. Youth who express positive attitudes toward drug use are more					
	likely to engage in a variety of problem behaviors, including drug use.					
<ul><li>23f. How wrong do you think it is for someone your age to: drink beer, wine or hard liquor (for example, vodka, whiskey, or gin) regularly?</li><li>23g.
