National Summary Statistics

1.1 Outline of Procedures Used to Obtain Pride National Summary Data

Since 1982, the Pride Survey has been used by schools, school systems, communities, and states, to gather data on student drug and alcohol use. The Pride Questionnaire for Grades 6-12 has been utilized by thousands of school systems across the United States, as well as in six other countries. Developmental studies (Adams, 1994; Craig and Emshoff, 1987; Metze, 2000) have indicated that the survey procedures developed by Pride result in reliable data on the prevalence and patterns of drug and alcohol use and other behaviors. Further, the evolution of Pride Questionnaires since 1980 not only provides research quality data, it provides information that can be easily used by educators, parents and others at the local school and community level to study and monitor the drug and alcohol use, and violent or threatening behaviors.

From the beginning, the Pride Survey has assisted local schools and communities with obtaining accurate, defensible information about the drug and alcohol use and related behaviors among their youth. The Pride Survey has been utilized by several state education and other government agencies in providing state-wide and regional information on student drug and alcohol use and related behaviors. These state-wide surveys have included near-census studies as well as surveys employing sophisticated sampling designs. Survey results have been used in program and policy decision making at state and

regional levels. In addition, each statewide survey also included reports to participating schools for use at the local school level.

Each year the Pride data is archived from each student questionnaire. This procedure allows local or state educational agencies to retrieve their data for multi-year comparisons should such a service be needed. This archiving process also provides for summary data to be compiled to create a national database. This national level summary data can be used by local and state clients as comparison data.

The Pride national archived data provide a rich source of information for the study of adolescent prevalence and patterns of drug and alcohol use and related behaviors. In the years prior to the 1989-90 school year, sample sizes of national annual summaries ranged from 14,815 in 1982-83 to 392,003 in 1988-89. Recent annual summaries involved a weighting system for states that conducted state-wide surveys and states where relatively large numbers of school systems used the Pride Questionnaire in local surveys. This weighting system was implemented to prevent any one state from having a disproportionate influence on annual summary results. Random samples were drawn from those states where disproportionately large numbers of students were surveyed. Tables 1-3 contain information regarding national samples for the past ten years.

Table 1 contains the total number of students surveyed in Grades 6-12 for the ten-year period. The large number of total students surveyed in certain years reflects statewide surveys conducted in those years. Table 2 provides percentage information by state for those states that comprised the Pride national summaries for each of the ten years. No state contributed more than approximately 10% for any year. Table 3 provides a year by year comparison by sex and race. These demographic comparisons indicate no inordinate differences among years.

As indicated in the previous discussion, the purpose of the Pride Questionnaire was to assist state and local education agencies in conducting quality surveys of student prevalence and patterns of drug and alcohol use. Questions concerning violence and other threatening behaviors have been added to the questionnaires in recent years. The national annual summary reports represent large numbers of students who have completed the Pride Questionnaire using standardized procedures. While not randomly drawn, the sheer magnitude of the numbers represented in the annual summaries, suggest that these data take on the properties of the population. In addition, the samples appear to have somewhat similar patterns of students sampled across the various states (see Table 2). Discussion of sample sizes may be found in Guilford's *Fundamentals Statistics in Psychology and Education*. While it is desirable to have non-biased sampling, e.g., samples based on random procedures; this is not always possible. Guilford states:

Where there is less than customary experimental control of the observations, every possible effort should be made to know the conditions under which the data are obtained. Thorough knowledge of the conditions should be a basis for deciding whether selection of cases has been biased. (Page 140)

The information that speaks most to consistent findings of the Pride annual summary analyses across the ten years, are the findings of other drug studies. For example, the Pride findings reflect similar findings of the NIDA funded studies conducted at the Institute for Social Research, University of Michigan, from the 1990-91 school year to the present.

1.2 National Summary Tables

This section contains tables of national summary statistics for the following:

- sample size for the past ten years,
- sex and race demographics for the past ten years,
- the sample distribution by state for the past ten years,
- comparisons of the frequency of drug use for the current year vs the previous year,
- chi-square analysis of the difference in use for the current year vs the previous year,
- violence summary for the current year and
- frequency of drug use for every year since the 07-08 school year.

NOTE: Pride Surveys constantly monitors drug trends among students and modifies the questionnaire from time to time when new drug use behaviors exhibit themselves. In recent years, there has been an increase in the concern over the abuse of over-the-counter and prescription drugs. In order to track these behaviors, three new drug categories were added to the 2009-10 Pride Surveys Questionnaire for Grades 6 to 12. In looking at overall illicit drug use (i.e. defined as any use of any of the illicit drugs), in the following tables, you will note an increase from the previous year. Some of the increase is due to the fact that the questionnaire now tracks more illicit drug categories than before. This will often happen when adding new drug categories.

Chapter 2

Graphics

The following graphs will assist you in understanding the relationship of student behavior to alcohol and other drug usage. You are encouraged to make slide shows from the graphs for presentations to school faculty, parents, media, and other audiences in the community.

The *Location* and *Time* of drug use graphs will be helpful in understanding the need for a commitment to drug abuse prevention by parents and the larger community - not just by schools. Student alcohol and other drug use occurs most often outside the school and at times when school is not in session.

The *Perceived Harm* of alcohol and other drugs will assist with understanding how the false assumptions concerning harm are related to drug use. When drugs are perceived as harmless, the probability of use increases.

Research indicates that easy access, *Availability*, to drugs increases the probability of use. Availability of alcohol and other drugs normally increases at higher grade levels.

2.9 Risk and Protective Factors – Cross Tabulations

This section looks at the following questions:

- Attend Church or Synagogue
- Take Part in Community Activities
- Make Good Grades
- Take Part in Sports Teams
- Take Part in School Activities
- Get Into Trouble at School
- Teachers Talk About Dangers of Drugs
- Parents Talk About Dangers of Drugs
- Parents Set Clear Rules
- Parents Punish for Breaking Rules

How students responded to each question is presented in table form. Students are then grouped based on how they responded to each question. The percent of illicit drug use for each subgroup is calculated and presented in graphic form. For example, if the bar for *Never* is at 40%, this means 40% of the students who marked *Never* reported using an illicit drug.

2.9.1 Attend Church or Synagogue

Students could respond to this question by marking Never, Seldom, Sometimes, Often or A Lot. The following table shows what percent of all students responded Never, what percent responded Sometimes, etc.

2.10 Safety and Health – Cross Tabulations

The following graphs and tables summarize some of the *Student Information* questions in regard to drug use. These data are calculated by examining specific subsets of your population. For example, a percentage is calculated for students who report carrying a gun and their liquor use. This percentage is calculated as follows:

$$\frac{\text{Number of those reporting carrying a gun to school and claiming to use liquor}}{\text{Number of those reporting carrying a gun and validly responding to the question *How Often Do You Use Liquor*}}$$

The *Ratio* describes the relationship between the groups examined on each graph. For example, in looking at Guns vs. No Guns, if the cocaine ratio were 5.3, this would mean the percentage of students who report cocaine use was 5.3 times higher for students who report bringing a gun to school compared to those who don't.

2.11 Carrying a Gun to School

Total number of students surveyed = 43196

Total number who responded to this question = 40851

1199 student(s) reported carrying a gun to school. (2.9% of total responding)

Of the 1199 student(s) who reported carrying a gun to school,

618 report(s) using alcohol (53.6%),

499 report(s) using marijuana (43.2%),

206 report(s) using cocaine (17.7%),

Chapter 3

Percentage Tables

This chapter contains survey results in tabular form. Each table corresponds to an item on the questionnaire. The tables contain percentage data by grade level, grades 6 through 8 combined, grades 9 through 12 combined, and all grades combined. The *N of Valid* column contains the number of students who responded to the question and the *N of Missing* column contains the number of students who did not respond to the question. The remaining columns contain the percentages of students responding to the particular response categories.

The percentage tables of the report appear in the same order as corresponding questions on the questionnaire. The Table of Contents contains the percentage tables by section and gives the page number where each section is located. The List of Tables contains the location of each individual table.

3.17 Frequency of Use

The last section of tables presents the frequency of drug use *How Often Do You Use* data with the categories *collapsed* as follows:

- Daily Use – Every Day
- Weekly Use – Once/Week + 3 Times/Week + Every Day
- Annual Use – Once/Year + 6 Times/Year + Once/Month +
Twice/Month + Once/Week + 3 Times/Week + Every Day

The Monthly Use category in previous reports has been changed to Past 30 Day Use. Due to recent changes in federal reporting requirements, Past 30 Day use for tobacco, alcohol, marijuana and prescription drugs must be calculated from the section headed *During the Past 30 Days*:. The other drugs are calculated as before by combining the categories of Once/Month thru Daily together of the *How Often Do You Use* data.

An additional drug use category has been created by combining the responses from marijuana, cocaine, inhalants, hallucinogens, heroin, steroids, ecstasy, meth, prescription drugs and over-the-counter drugs together to create an illicit drug use variable. This category represents any illicit drug use regardless of the type of drug.

Chapter 4

Narrative Report

4.1 Introduction

Tobacco, alcohol, drug use and violence continues to be a persistent problem facing the youth of America. The use of mind-altering chemicals has proven to be especially harmful to the adolescent growth and development process. Psychoactive drugs interfere with physical, social, and emotional growth during the critical years of adolescent development.

An adolescent who uses intoxicants is not only at high risk of becoming drug dependent but is also at an increased risk of dropping out of school, getting involved in crime, attempting suicide, or becoming involved in an assortment of unacceptable behaviors.

The prevention of adolescent drug and alcohol use, bullying and related behaviors is most likely to occur when parents, teachers, faith leaders, other individuals and community organizations, who are part of the child's friendship circle...

- are well informed of the harmful effects of drugs,
- understand potential danger from threatening behaviors,
- recognize behavioral changes that accompany drug use,
- and understand how drug use and violence is encouraged and accepted in the social world of the child.

Another key to successful prevention programming is the direct involvement of

youth in planning and implementing programs.

This report will help parents, school personnel, students, and other "youth care givers" understand the extent of drug use and threatening (bullying) behaviors in your community.

Your questions concerning this report or information on other reports and services of **Pride Surveys** may be obtained by calling the **Pride Surveys** office at 1-800-279-6361.

4.1.1 The Pride Surveys Questionnaire

As with any type of meaningful survey, it is important that the data collected are of high quality and utility. The **Pride Surveys Questionnaire** was developed to provide accurate, reliable and useful information about students through their reported behaviors, perceptions and living environments. Questionnaire forms and administration procedures have undergone extensive reviews by independent evaluators over the years. The survey provides users with data of high quality and practical application. For more technical information about the development of the questionnaire, see the *Pride Technical Report: The Pride Questionnaire for Grades 6-12 Developmental Study*. These studies are available on the Pride Surveys website at www.pridesurveys.com.

4.1.2 The Report

This report was prepared to be used as part of a community-wide prevention program. For maximum use of your school drug and violence survey, we suggest that you review each section carefully, share the information with school officials, teachers, students and parents, and prepare a press release to inform your community of the results.

This narrative report contains five sections, including the introductory Section 4.1. Section 4.2 contains information on *Gateway Drugs* (tobacco, alcohol, and marijuana). Section 4.3 contains information on *Other Illicit Drugs* (cocaine, inhalants, hallucinogens, heroin and steroids). The following information on each drug category has been selected for analysis in this report:

- perceived risk of drug use,
- frequency of drug use reported by students,
- when students reported using drugs,
- where students reported using drugs,
- friends' use of drugs,
- age of onset of use of drugs,
- availability of drugs as reported by students.

Section 4.4 contains suggestions for community awareness activities utilizing the media and presentations of survey findings to various audiences. Note that all statistics compiled from your survey results are highlighted in **bold**.

It is important that your school survey be viewed as part of an ongoing process that provides needed information about the prevalence and patterns of tobacco, alcohol and other drug use by students in your community. By using the ***Pride Surveys*** in your assessment process, you can be confident of high quality, consistent, and reliable information to assist you in your drug prevention efforts. For additional assistance with questionnaire data, call the Pride Surveys Office at 1-800-279-6361. For additional information about the health impact of drugs visit the Pride Surveys website at www.pridesurveys.com.

4.2 Gateway Drugs

The *gateway drugs* are defined in this report as tobacco, alcohol, and marijuana. In most states, alcohol and tobacco products are illegal when used by minors, but are legal when used by adults. Nevertheless, they are generally easy to obtain and are widely used by students. Use of alcohol and cigarettes at early ages has been linked to later use of illicit drugs, thus the term *gateway drugs*. Marijuana is the illicit drug most widely used by the adolescent population. Although marijuana is itself a dangerous illicit drug, it is also a strong predictor for use of other addictive drugs. In this section, harmful effects, prevalence, and patterns of tobacco products (cigarettes, smokeless tobacco, and cigars), alcohol (beer, wine coolers, and liquor), and marijuana use are reported.

4.2.1 Tobacco

Harmful Effects of Tobacco Products

The use of tobacco products was not always considered to be drug use. However, cigarette smoke contains more than 1,200 chemicals, none of which are beneficial to man. When cigarette smoke is absorbed into the body, it decreases the oxygen-carrying capacity of the blood and increases the clotting rate. This reaction, combined with hardening of the arteries associated with smoking, can cause a heart attack. Using tobacco products is a major cause of emphysema, chronic bronchitis, lung cancer, heart disease and cancer of the mouth.

Research indicates that mothers who smoke during pregnancy may damage the unborn child. Women who take birth control pills should not smoke because of increased risk of blood clots, stroke, heart attack and liver tumors.

It is important that students know the health consequences of tobacco use, but they may be influenced more by the social stigma and the unattractive appearance using tobacco can cause. For example, young people may choose not to smoke because cigarette smoke makes their hair smell bad, turns their teeth and fingers yellow, and causes bad breath. These are important considerations for adolescents who are usually concerned about their appearance.

Frequency and Effects of Tobacco Use

While millions of people in this country have quit smoking cigarettes, there are still millions that continue to smoke despite warnings of detrimental health effects. It is important to examine the use of cigarettes by students, for they are engaging in an unhealthy practice. Also, students who start smoking tobacco early are more prone to try other drugs, particularly marijuana, than students who do not use tobacco products.

Additional information about frequency of cigarette smoking by your students may be found in the Percentage Tables chapter of your Pride report.

Locations and Times of Tobacco Use

A knowledge of the patterns of adolescent tobacco use is important when planning and implementing prevention programs. Two of the most important questions that were asked on the *Pride Surveys* were *Where* and *When* various drugs are used. Students were asked to respond to various locations and times they used tobacco products. Responses to *Where* students used gateway drugs included *At Home, At School, In a Car, Friend's House and Other* places in the community. Time of use responses consisted of *Before School, During School, After School, Week Nights and Weekends*. This information is important in providing insight into the use patterns of tobacco products by your students.

Although there was some variation, students who smoked cigarettes reported smoking at most locations and times. This finding may be explained by the highly addictive nature of the nicotine in tobacco, the non-intoxicating effects of smoking tobacco (as opposed to the intoxicating effects of alcohol), and adult tolerance for possession and use of tobacco products by minors. However, as explained earlier, cigarette smoking does present health hazards for the users and for those who share a common environment.

4.2.2 Alcohol

Harmful Effects of Alcohol

Alcohol is a central nervous system depressant, which relaxes the inhibiting and controlling mechanisms of the brain. The effects of drinking alcohol depend on the amount consumed, body size, food intake, age, genetic susceptibility, and tolerance. Alcohol is metabolized at the rate of about 1/2 ounce per hour, and coffee, tea, or cold showers will not speed up this process. The effects of drinking alcohol can range from mild intoxication, to mental confusion, to aggression, to respiratory depression and death. Repeated or chronic use of alcohol may cause damage to the liver, brain, stomach, skin, and other systems of the body.

The sources of alcohol most available to youth for consumption are beer, wine or wine coolers, and various forms of liquor. It is important for youth and adults to understand that sources with lower percentages of alcohol, such as beer and wine coolers, are equally as capable of causing intoxication and dependency as liquor.

However, there appears to be a progression of alcohol use that begins with beer or wine coolers and on to liquor. Drinking liquor produces higher levels of intoxication, probably due to its higher concentration of alcohol.

Since the human body builds a tolerance to alcohol, there is a potential for addiction for those who drink. This risk of addiction is greater for the developing adolescent than for mature adults. Junior and senior high students who use alcohol run the risk of delaying or retarding their normal physical, mental and social development. Drinking and driving is a popular practice among teenagers, and alcohol-related accidents are a major cause of death among 15- to 19-year-olds.

Frequency and Effects of Alcohol Use

Although drinking alcoholic beverages is illegal for minors, beer, wine coolers, and liquor are popular intoxicants for students. It should be kept in mind that these data are from 12- to 18-year-old students. Not only are they minors under the law, and therefore violating the law when using alcohol, but they are also young adolescents who are abusing alcohol at least once a month or more often.

Locations and Times of Alcohol Use

Drinking alcoholic beverages can produce a mind-altered or intoxicated state. Given the impairment in thinking and judgement produced by alcohol intoxication, time of use is an important consideration for targeting prevention activities. The following figures contain percentage data for the times of alcohol use as reported by junior and senior high students in your community.

It is important to note that past research indicates that *At School* is the least popular location for use and *During School* is the least popular time of use. *Weekends* tends to be the most popular time of use and *At Home* tends to be the most popular with younger students while *Friend's House* and *Other* tends to be the most popular with older students. These data strongly support the concept of parent and community involvement in reducing alcohol use by youth.

Availability of Tobacco Products & Alcohol

The question of availability of tobacco products has been included on the **Pride Surveys**. In many communities, cigarettes are purchased by minors from vending machines in public places without fear of reprisal.

Students were asked to report how easy it was for them to get alcohol, specifically in the forms of beer, coolers, breezers, etc. and liquor. Students could respond that they *Cannot Get* alcohol, or that alcohol was *Very Difficult*, *Fairly Difficult*, *Fairly Easy*, or *Very Easy* to get. The following table provides the percentages of students who responded to the *Fairly Easy* or *Very Easy* categories for obtaining tobacco products as well as beer, wine coolers, liquor, and marijuana.

Use of tobacco products and alcohol by minors is illegal, yet they are readily available to students. Popular culture condones and often encourages the use of tobacco and alcohol. While it is important to discourage the illegal use of tobacco and alcohol through formal education and community prevention programs, it is also important to reduce the ease by which students may obtain tobacco and alcohol products, whether from home or a neighbor's home, or from merchants that sell alcoholic beverages to minors. Cooperation of parents, students, and educators with local, state, and federal law enforcement agencies should play an important role in reducing the availability of gateway drugs to students.

YOUR NOTES:

4.2.3 Marijuana

Harmful Effects of Marijuana

Marijuana is a crude drug made from the *cannabis sativa* plant, and it contains more than 400 known chemicals. Seventy or more of these chemicals, called "cannabinoids," are found only in the cannabis plant, and in recent years we have learned much about their effect on the human body. One of the cannabinoids, THC (delta-9-tetrahydrocannabinol), is the major mind-altering chemical in marijuana.

Street names for marijuana include *pot*, *grass*, and *weed*. Smoking pot became popular with college age students during the late 60's and early 70's. By the middle 70's the age of users had dropped to junior high and even elementary school levels.

The marijuana used in the 1960's was often quite low in THC content, ranging from .25 to 1 percent, and few health hazards were documented during that period. In the early 1970's, the Mexican marijuana coming into the country averaged 1 to 2 percent THC content. After 1975, Colombian marijuana became more prominent, and it ranged from 3 to 6 percent in THC content. Presently, we have marijuana (a variety called *Sinsemilla*) being grown in the U.S. with THC levels of more than 24 percent. Because of the stronger, more potent varieties now available, the intoxicating and health effects of smoking marijuana have increased dramatically. More students are receiving treatment for marijuana addiction than for alcohol addiction.

The THC and other cannabinoids are fat-soluble chemicals and accumulate in the fatty linings of cells. They are metabolized very slowly, and may stay in the body four to six weeks. Thus, the students who smoke pot *only on weekends* will gradually accumulate THC content in their body cells. This build-up of THC is unlike the effect of alcohol, which is water-soluble and metabolized out of the body much more quickly (usually within 24 hours).

Accumulation of THC in the body affects those areas where there is an accumulation of fatty cells, such as the brain, heart, lungs and reproductive systems. The effect of this drug is even more severe on developing adolescents in junior and senior high school. Not surprisingly, recent research indicates that regular marijuana use reduces the mental efficiency of students and may increase their susceptibility to infection and disease, by interfering with their immune system.

Production and use of marijuana is illegal in the United States and most other

countries around the world. The following table contains data on your students' use of marijuana at least once a month or more often.

Past 30 Day Use of Marijuana

Location and Time of Marijuana Use

Location and time of marijuana use followed a similar pattern to that of alcohol use, although the percentage of students who reported smoking marijuana was considerably less than the percentage who reported drinking alcohol.

Friends' Use & Age of Onset of Use of Marijuana

Often, marijuana and other illicit drug use will occur within a friendship circle and those who report use among friends are more likely to use. Past analysis shows that marijuana is typically the most commonly used of illicit drugs. The following graphs present percentage data on friends' use of your students.

It is important to remember that early use is an indicator of increased risk for addiction. Figure 4-8 presents data on age of onset of use of marijuana for your students.

4.3 Other Illicit Drugs

As stated in the previous section, marijuana is the illicit drug most used by junior and senior high students. However, many marijuana users become multiple drug users. Knowledge of the nature and extent of such illicit drug use is very important in gaining a perspective on the overall adolescent drug problem in your community. It will also provide you with information on the percentages of your students who are drug dependent or who are at high risk of becoming drug dependent and in need of professional help.

The other illicit drug categories included in *The Pride Surveys Questionnaire for Grades 6-12* are as follows:

Cocaine	including crack
Inhalants	such as glue or solvents
Hallucinogens	including LSD and PCP
Heroin	opiates
Steroids	
Ecstasy	MDMA
Meth	ice, crank, etc.
Prescription drugs	
Over-the-counter drugs	

Additional information on all categories of drugs obtained from your survey may be found in the tabular report.

Drug-Free Communities Support Program Core Measures

5.1 Drug-Free Communities Support Program

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which is typically referred to as the Core Measures of which there are currently four (30 Day Use, Perception of Risk, Parental Disapproval and Friends Disapproval). The drug categories measured are tobacco, alcohol, marijuana and prescription drugs. The first set of four tables found on the following page examines these measures broken down by grade level. The second set of four tables examines these measures broken down by gender. The meaning of the *pct* column will vary with each table and is described below. The *n* column represents the number of students who responded to the question (i.e. sample size).

30-Day Use The question *During the past 30 days?* is used to measure this statistic by reporting the percentage of students who responded *Yes* to the question.

Perception of Risk The question *How much do you think people risk harming themselves physically or in other ways if they...* is used to measure this statistic by reporting the percentage of students who report that using the drug is *Moderate Risk* or *Great Risk* to their health.

Perception of Parental Disapproval The questions *How wrong do your parents feel it would be for you to use ...?* is used to measure this statistic by reporting the percentage of students who report that their parents would feel it is *Wrong* or *Very Wrong* to use tobacco, alcohol, marijuana and prescription drugs.

Perception of Friends Disapproval The questions *How wrong do your friends feel it would be for you to use ...?* is used to measure this statistic by reporting the percentage of students who report that their friends would feel it is *Wrong* or *Very Wrong* to use tobacco, alcohol, marijuana and prescription drugs.
